Forthcoming Meetings

Monday September 8 Dave M0SXD - Repairing vintage and old radios
Monday October 13 Bletchley Park DVD
Monday November 10 TBD

CATS is twinned with the Crescenta Valley Radio Club
Glendale California USA www.gsl.net/cvrc

CATS August Meeting

The August CATS meeting was a barbecue at the QTH of Prue G4RWW who had kindly agreed to host this event again.

The weather forecast was not good as Steve G3WZK and XYL Jenny drove through a short but intense rain shower on the way to the barbecue. However they arrived in the dry as did most of the other 22 attendees and it wasn't long before Steve G7SYO had taken on the role of grillmeister and the barbie was in full swing.

Sadly, the rain returned. Although gentle at first, it slowly built up until even the hardiest of the members and partners had retreated indoors.

L-R: Gerry G8NNT, Jenny and Deanne

L-R: Mike G6YOG and Steve G7SYO

However, the rain didn't spoil the members' enjoyment of the event at all. There was plenty of friendly chat and, thanks to Prue's sterling efforts, lots of yummy food. This year's event was voted again a great success, so a big CATS' "thank you" to Prue for organizing it.

CATS September Meeting

This will feature a talk by Dave Smith M0SXD on repairing vintage/old radio equipment.

The date for your diaries is September 8th 2014.

CATS October Meeting

This meeting will feature a DVD about Bletchley Park.

The date for your diaries is October 13th 2014.

Helpers needed for Kempton Park rally and CATS bazaar

It's now only a month or so until these two regulars in the CATS' calendar and more helpers are needed for both events. If you would like to help on either or both of these occasions, even if you only have a couple of hours to spare, please contact Graham 2E0XDZ (who will be in charge of the Bring & Buy stand at Kempton Park) or any committee member.

The dates for your diary are:

Kempton Park - November 9th - Help needed on B&B stand

CATS Bazaar - November 23rd – Help needed to set up on the early evening of 22nd November and to run the event, including the B&B stand, on 23rd November.

Many members will be aware of plans to redevelop the site of the car park that we use for the CATS Bazaar. Currently, this work is due to begin in January 2015.

However we have recently learned that there are plans to commence an archaeological dig on the site of the present car park, commencing on November 14th, ie 9 days before the proposed CATS Bazaar. We are hoping that we can find a way of working with other interested parties so that the bazaar can go ahead, more or less as normal, as the building in which the Bazaar is held is not directly affected by the redevelopment proposals. It may however be necessary to

make last-minute changes to plans for the 2014 CATS Bazaar, particularly for parking and access.

Therefore, anyone proposing to attend this year's CATS Bazaar is advised to check the CATS website (www.catsradio.org) before setting out as there may be last-minute changes to access or parking arrangements.

Friedrichshafen 2015

Andy G0KZT writes: Following the recent coverage of the Friedrichshafen Hamfest on the TX Factor, it got me thinking about the possibility of making a visit with CATS members. The dates for 2015 are Saturday 26th - Monday 28th June so I would at this time like to poll what support there would be amongst us CATS to go.

A quick check shows that flying direct to Friedrichshafen is not an option as it is a winter resort and it takes three hops. It is possible to fly from London City to Zurich for around £132 but there is the addition of car hire and accommodation to factor in. This means the only other option is to perhaps drive direct. If you are thinking of going and would like to form a planning sub-committee, please get in touch with me as soon as possible.

Andy's contact details are on the front page of this issue of CATS Whispers.

CATS Play Weekend 2014

Andy G0KZT writes: Friday 1st August saw CATS begin another full weekend of Amateur Radio at our regular site at Paddock Barn Farm near Caterham. Our first hurdle was to gain entry through the electric gate as the gate code had changed. Once inside, with the new code having been sent out by SMS, I learnt from the security chap that we were sharing the field with a young herd of heifers and bullocks, from now on to be referred to as "The Bovine Enemy". Our proposed operating area was near to their feeding pen and their inquisitiveness soon became evident, so we moved further away and began to assemble the tent. On site was Glenn G4FVL, Len G0GNQ (who had made the journey from his new QTH in Margate), Gary M6LHV (our newest member) and myself.

The tent was soon up and the beginnings of the station assembled. I had wedged my

Clarke SCAM 12 pump-up mast into my Ford Fiesta and had enough equipment to put a 2m/70cm station together. The aerial was a Diamond X50 dual band collinear mounted on the SCAM 12.

Meanwhile Gary M6LHV had put his station together using a Yaesu FT-857 powered by a solar panel and a small battery (acquired free from a local MOT station second hand en-route to the site). The aerial used was one of Len's dipoles that he had been building with his new club, used in a sloped configuration.

I had to make what was to be the first of far too many trips back to my QTH for a second load of equipment. On my return I began operation on 2 metres using the callsign GX4FUR/P. Once again the location proved to be excellent for generating plenty of contacts with stations queuing up to work us.

Note the hazard tape to deter the cows. It doesn't work!

While most of the persons present went into town for a takeaway, I fired up my BBQ which was also used by Gary M6LHV. The Chairman's Brew was flowing and I continued to operate until 10.30pm, finally succumbing to the need of sleep having worked the night before and forfeited any sleep during the day.

By now, we were finding that "The Bovine Enemy" were keeping us busy with all aspects of our activity drawing their attention. We almost considered giving up but realised that we did not have enough daylight to clear away. The herd was not aggressive, just inquisitive. We worked a station in Harlow who had been a stockman and he commented that chasing after them would only make them want to "play" more. I lured them into the next field (which had no dividing gates to secure them) and fortunately, they stayed there until the next morning.

Our main concern was whether they would

become entangled in a guy and pull a mast down or eat something. There was also the thought that they could have trampled through the site during the night.

The Bovine enemy inspecting the generator

At around 6.30am on the Saturday morning the Bovine Enemy reappeared: this time they herded around the generator and worryingly seemed to enjoy licking the fuel cans. They even worked out how to pull the power lead out of the generator!

After breakfast the 17 element Tonna was assembled to go on a 25' sectional mast. At this stage all was well. I had to return home to collect my daughters Melissa and Jessica who wanted to come along. On my return we had been joined by Ian M3IGP, Stuart G6CJR, Peter M0PWW, Terry G4CDY, Mike M1CCF, Adam G7CRQ and Kim G6JXA. But as I pulled onto the site, I noticed a hive of activity around the 25' mast which was lying on its side.

The wonky driven elements after Disaster No.1!

This was Disaster No.1 – but it wasn't the fault of The Bovine Enemy - one of my guy tensioners had unwound and become detached from the ground stake. The aerial had fallen onto the rear driven elements and substantial damage had been caused to the boom. Duct tape and some careful straightening of the boom made it serviceable, albeit that the driven elements were a bit "wonky". The remaining guy ropes were checked and the beam was pushed back up again.

Double decker TS-2000 -Mine at the bottom with autocalling but only 18 watts, and Stuart's on top capable of transmitting the full 25 watts required

Adam G7CRQ & Stuart G6CJR

We had planned to take part in the Low Power Contests: 2 metres on Saturday and 70 cms on Sunday, so I got the ball rolling and began operating in the 2m contest. All was going well until about 35 minutes into the event, when the mast fell down again, breaking the boom in half. Disaster No.2! No amount of Duct Tape could save the boom this time. It is believed that the wind blowing the guy ropes had caused a turning movement on the tensioners that caused the tensioner to unwind itself again. However, luck had been on our side because, most importantly, no one was hurt

when the mast fell, although Ian M3IGP only narrowly avoided being hit.

Realising that the beam was now useless, I returned home to grab my 7 element ZL Special while those on site renewed the guys with rope that Frank G3ZMF had supplied and prepared the mast for the arrival of the replacement. The replacement beam was quickly attached and operation continued.

Due to a family commitment, I had to soon leave the site again, but first I attached the 70cms 19 element Tonna to the SCAM 12 mast in readiness for the 9.00 am start the following morning, leaving Kim G6JXA assisted by Terry G4CDY to operate the 2m contest station. I learned later that when Terry had to depart, nobody else on site knew how to operate the contest scoring computer and operation ceased. The contest was due to finish at 8.00pm so the last 2 hours of the event were sadly lost.

L-R: M0PWW, M3IGP, and seated G0GNQ & M6LHV

I arrived back on site on Sunday morning just before the beginning of the 70cms contest and found Stuart, Gary and Len still on site, later joined by Peter M0PWW. As expected, contacts were fewer and harder to achieve than in the 2m contest the day before. We had to choose from running lower power but with the facility to auto-repeat our call, or to run with the full 25 watts but with manual calling. In the end, the soft option was to use the auto-caller.

Peter then took over from me to operate in what I believe was his first ever contest. He was to more than double our contest station count. The 70cms contest was due to finish as 1.00pm and the general consensus at the

conclusion of the contest was to close the station down and pack up.

L-R: Peter M0PWW, Len G0GNQ and Gary M6LHV

The site was finally cleared by around 3.00pm with Len kindly giving Gary a lift back to his QTH, Peter making his way to Godstone to catch a bus back to Merstham and Stuart's and my family car loaded to the max with the rest of the gear.

The weather had been very kind to us with only rain overnight from Friday into Saturday. However, very loud crashes of static were detected on the radio from a storm, heard by stations across the country in the 2m contest. We at least had dry equipment to take home. As well as the disasters of the aerial mast, we also had to contend with the primary club generator showing signs of low volts. The spare club generator was on site and used as a substitute, albeit with not such good fuel efficiency as the other one.

We clearly have an issue with sharing the field with cows. In the past we have had the company of horses which never bothered us. We will have to review the further use of this site but perhaps there can be some arrangement to cordon us off from "The Bovine Enemy". The site does provide relative security (not being overlooked by the public and the electric security gate) and the use of a toilet/wash room facility. And of course it is nice and high above sea level.

I can appreciate that the selection of a date won't suit everybody. We also had some members fall ill immediately prior to the event which cannot be helped. I hope those who did make it enjoyed themselves and I would like to thank them all for making the effort to come along.

I would like to thank all the members and guests who made it to the site and gave us their support. But I would especially like to thank Glenn, Stuart and Frank for providing the remainder of the equipment, both personal or from the club resources not supplied from the QTH of G0KZT.

Andy Briers G0KZT
